

**NAME**

macrandrd - OpenBSD MAC address randomization daemon.

**SYNOPSIS**

**macrandrd** [-vDcd] [-v] *version* [-u] *usage* [-D] *daemon* mode [-c] *Change* MAC addresses randomly.

**DESCRIPTION**

**macrandrd** is a tiny OpenBSD MAC address randomization daemon. **macrandrd** modifies MAC address of every active network interface in the system except for the following interfaces: lo0 enc0 pflog0.

**OPTIONS**

- D Daemon mode. Use **rcctl**(8) instead.
- c Change randomly MAC addresses.
- v Information version.
- d Change randomly MAC addresses. Debug mode.

**EXAMPLE**

```
$doas rcctl enable macrandrd
```

```
$doas rcctl start macrandrd
```

**SEE ALSO**

**rcctl**(8)
